Refer to next page.				
The requirements of EN 61000-6-3:2007+A1 and EN 61000-6-2:2005 are stricter than that of EN 61000-6-4:2007+A1 and EN 61000-6-1:2007 respectively, so the EMC tests were performed according to EN 61000-6-3:2007+A1 and EN 61000-6-2:2005.

Type designation	EVVO 3000TL 3P	EVVO 4000TL 3P	EVVO 4800TL 3P	EVVO 5000TL 3P	EVVO 6000TL3 P	EVVO 8000TL 3P	EVVO 10000TL 3P	EVVO 12000TL 3P
PV DC input port								
Max. input voltage	1000V							
MPP voltage range	160-960V							
Max. input current	2×11A							
AC output port								
Rated voltage	3/N/PE, AC 230/400V							
Max. output current	3×4.8 A	3×6.4A	3×8.0 A	3×8.0 A	3×9.6A	3×12.8 A	3×15.9A	3×19.1A
Rated frequency	50Hz							
Rated output power	3kW	4kW	5kW	5kW	6kW	8kW	10kW	12kW
Power factor	>0.99(adjustable +/- 0.8)							
Protective class	I							

**Identities and differences:**

In electrical characteristics, the above models have same circuit diagram. The main differences among them are the software setting, inverter inductor and BUS capacitor. Therefore, with the consideration of the differences, all the EMC tests were performed on EVVO 12000TL3P and EMI test were performed on EVVO 6000TL3P.

## TEST SUMMARY

4.1.1 HARMONICS ON AC MAINS

*Result:*

*Passed*

4.1.2 VOLTAGE FLUCTUATIONS ON AC MAINS

*Result:*

*Passed*

4.1.3 MAINS TERMINAL CONTINUOUS DISTURBANCE VOLTAGE

*Result:*

*Passed*

4.2.1 RADIATED EMISSION

*Result:*

*Passed*

5.1.1 ELECTROSTATIC DISCHARGE

*Result:*

*Passed*

5.1.2 RF RADIATED IMMUNITY TEST

*Result:*

*Passed*

5.1.3 POWER FREQUENCY MAGNETIC FIELD

*Result:*

*Passed*

5.2.1 ELECTRICAL FAST TRANSIENTS AND BURSTS

*Result:*

*Passed*

5.2.2 SURGES

*Result:*

*N/A*

5.2.3 CONDUCTED DISTURBANCES, INDUCED BY RF FIELDS

*Result:*

*Passed*

5.2.4 VOLTAGE DIPS AND INTERRUPTIONS TO AC POWER PORT

*Result:*

*N/A*

## 1 Test Sites

### 1.1 Test Facilities

**Laboratory A: Shenzhen Balun Technology Co., Ltd.**

**Address: Block B, 1st FL, Baisha Science and Technology Park, Shahe Xi Road, Nanshan District, ShenZhen, Guangdong Province 518055, P.R. China**

**Laboratory B: SHENZHEN EMTEK CO., LTD. (EMTEK)**

**Address: Bldg. 69, Majialong Industry Zone, Nanshan District, Shenzhen, Guangdong, China**

The used test equipment is in accordance with CISPR 16-1 series standards for measurement of radio interference.

The EMC tests except RF radiated immunity have been conducted in laboratory A by “Shenzhen Balun Technology Co., Ltd.” under supervision of TÜV Rheinland’s engineer.

The RF radiated immunity test has been conducted in laboratory B by “SHENZHEN EMTEK CO., LTD. (EMTEK)” under supervision of TÜV Rheinland’s engineer.

## **2 General Product Information**

### **2.1 Product Function and Intended Use**

The EUT (equipment under test) are grid-connected PV inverters. For the further information, refer to the user's manual.

### **2.2 Ratings and System Details**

System input : Refer to page 2  
Rated frequency : Refer to page 2  
Rated power : Refer to page 2  
Protection class : I

### **2.3 Independent Operation Modes**

The basic operation modes are: "ON" or "Off".

### **2.4 Noise Generating and Noise Suppressing Parts**

Refer to circuit diagram for further information.

### **2.5 Submitted Documents**

Circuit diagram, rating labels and user manual.

## 3 Test Set-up and Operation Modes

### 3.1 Principle of Configuration Selection

**Emission:** The equipment under test (EUT) was configured to measure its highest possible emission level. The test conditions were adapted accordingly in reference to the instructions for use.

Refer to the related paragraph of this report.

**Immunity:** The equipment under test (EUT) was configured to have its highest possible susceptibility against the tested phenomena. The test conditions were adapted accordingly in reference to the instructions for use.

Refer to the related paragraph of this report.

### 3.2 Physical Configuration for Testing

Refer to the related paragraph of this report.

### 3.3 Test Operation and Test Software

During the tests, the EUT was monitored by the software specified by the manufacturer.

### 3.4 Special Accessories and Auxiliary Equipment

During the tests, the auxiliary equipment was used as following.

Auxiliary equipment	Manufacture	Rated parameters
Solar IV simulator	Kewell	IVS-60KW, 602006150100159

### 3.5 Countermeasures to achieve EMC Compliance

No special measure is employed to achieve the requirement.

## 4 Test Results EMISSION

### 4.1 Emission in the Frequency Range above 30 MHz

#### 4.1.1 Harmonics on AC Mains

<b>Result:</b>	<b>Passed</b>
----------------	---------------

Date of testing : 29.06.2017  
Test procedure : IEC 61000-3-2:2014(for EVVO 6000TL3P)  
IEC 61000-3-12:2011 (for EVVO 12000TL3P)  
Test duration : 2.5min  
Harmonic order : 2 – 40<sup>th</sup>  
Frequency range : 0 – 2kHz  
Test voltage : AC 400V, 50Hz  
Ambient condition : Temperature: 25°C; Relative humidity: 55%  
Test condition : Operated continuously with full load  
Following are the measurement results, which were obtained via an automatic measurement system.

**Table 2: Harmonic currents measurement result for L1 of EVVO 6000TL3P**

#### 4.1.2 Voltage Fluctuations on AC Mains

<b>Result:</b>	<b>Passed</b>
----------------	---------------

Date of testing : 18.06.2017  
 Test procedure : IEC 61000-3-3:2013 (for EVVO 6000TL3P)  
 IEC 61000-3-11:2000 (for EVVO 12000TL3P)  
 Ambient condition : Temperature: 25°C; Relative humidity: 55%  
 Test condition : Operated continuously with full load

According to the characteristics of the sample, as specified by clause 5 of the basic standard, following limits apply:

- the value of  $P_{st}$  shall not be greater than 1.0;
- the value of  $P_{lt}$  shall not be greater than 0.65;
- $T_{max}$ , the accumulated time value of  $d(t)$  with a deviation exceeding 3.3 % during a single voltage change at the EUT terminals, shall not exceed 500 ms;
- the maximum relative steady-state voltage change  $d_c$ , shall not exceed 3.3%;
- the maximum relative voltage change  $d_{max}$ , shall not exceed 4%.

Following are the measurement results obtained via an automatic testing system.

**Table 6: Voltage fluctuations and flicker measurement results for L1 of EVVO 6000TL3P**

	$d_c$	$d_{max}$	$T_{max}$	$P_{st}$	$P_{lt}$
Limits	3.3%	4%	500ms	1.000	0.650
Result	0.011%	0.022%	0ms	0.193	0.212

**Table 7: Voltage fluctuations and flicker measurement results for L2 of EVVO 6000TL3P**

	$d_c$	$d_{max}$	$T_{max}$	$P_{st}$	$P_{lt}$
Limits	3.3%	4%	500ms	1.000	0.650
Result	0.010%	0.018%	0ms	0.192	0.212

**Table 8: Voltage fluctuations and flicker measurement results for L3 of EVVO 6000TL3P**

### 4.1.3 Mains Terminal Continuous Disturbance Voltage

<b>Result:</b>	<b>Passed</b>
----------------	---------------

Date of testing	: 27.06.2017
Test procedure	: EN 61000-6-3:2007+A1, CISPR 16-2-1:2008 and CISPR 16-1 series standards
Frequency range	: 0.15 - 30MHz
Limit	: Table 2 of EN 61000-6-3:2007+A1
Kind of test site	: shielded room
Ambient condition	: Temperature: 25°C; Relative humidity: 55%
Expanded measurement uncertainty ( $k=2$ )	: 3.23dB

#### Test Setup

Input voltage	: PV input port: DC 600V; AC output port: AC 400V, 50Hz
Operational mode	: Operated continuously with full load
Artificial hand	: N/A
Earthing	: Earthing by power cord. (as class I equipment)

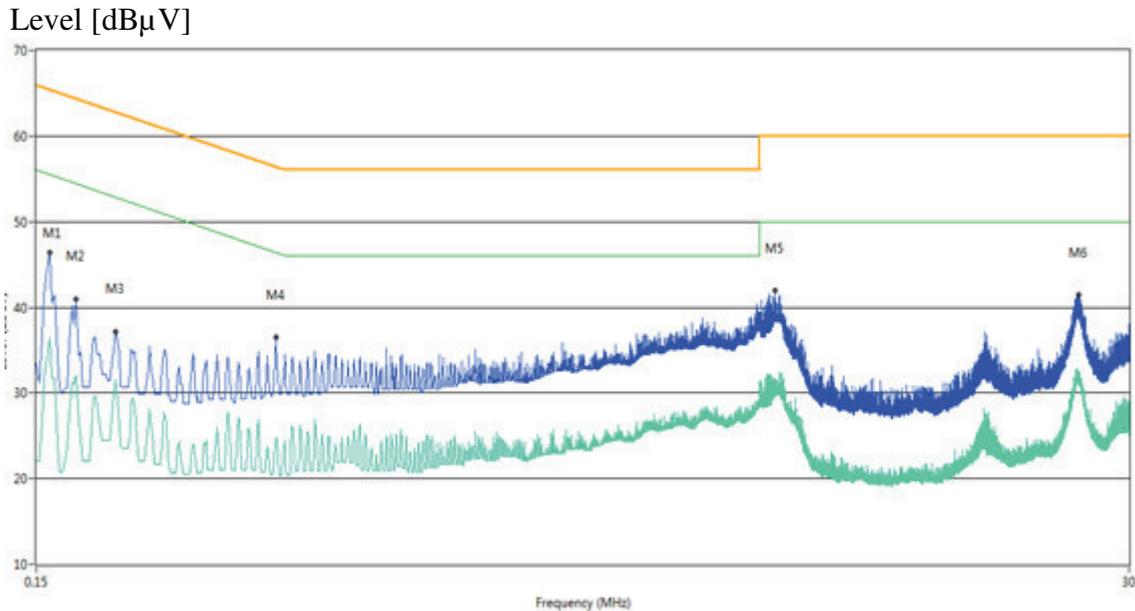

The measurement setup was made according to CISPR 16-2-1:2008 in a shielded room.

The measurement equipment like test receivers, quasi-peak detector and Artificial Mains Network (AMN) are in compliance with CISPR 16-1 series standards.

The tested object was setup on a 0.4m high wooden table. The EUT was placed 0.8m away from the AMN. The part of the cord longer than necessary to be connected to the AMN was folded forth and back parallel so as to form a bundle with a length between 0.3m and 0.4m.

The following figures and tables were those measured by an automatic measuring system. Both Quasi-Peak and Average Value were measured. A previous test was firstly performed with Peak detector and Average detector. The final test was performed with Quasi-peak detector and Average detector at those critical frequencies during the previous test. In the Figures, “●” means Quasi-Peak Value and “•” means Average Value which was measured in final measurement.

## 4.2 Emission in the Frequency Range above 30 MHz

### 4.2.1 Radiated Emission

<b>Result:</b>	<b>Passed</b>
----------------	---------------

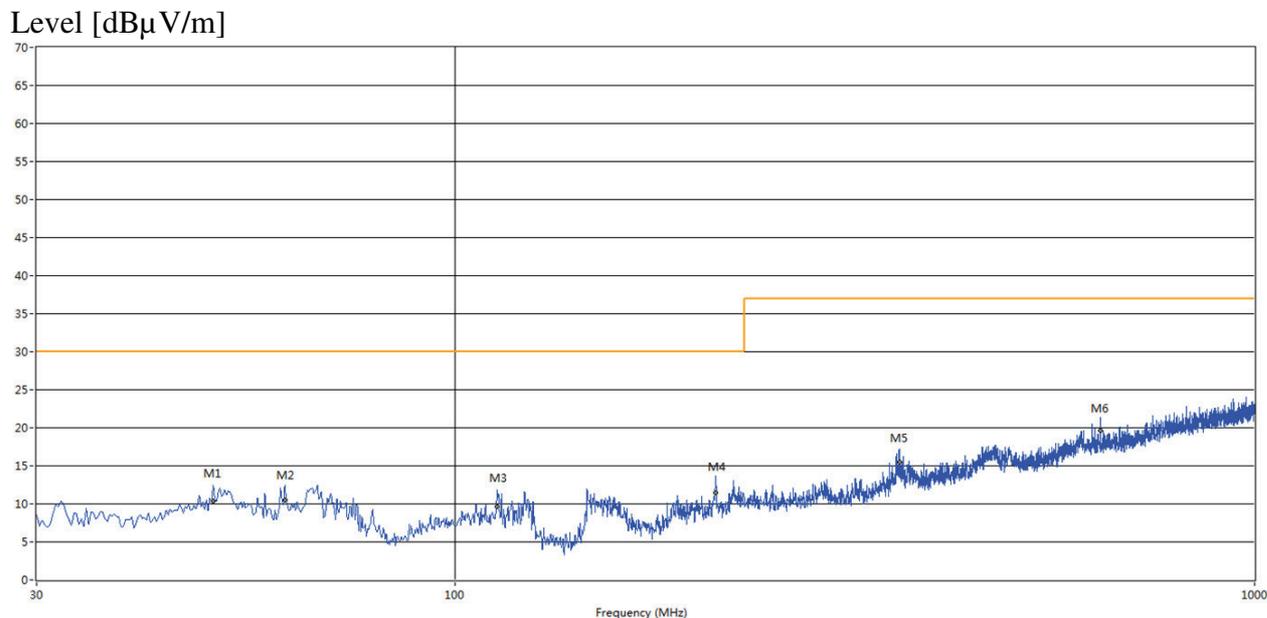

Date of testing	: 04.07.2017
Port	: Enclosure
Test procedure	: EN 61000-6-3:2007+A1 and CISPR 16-2-3:2006
Limit	: Table 1 of EN 61000-6-3:2007+A1: Quasi-peak limits (10m measurement distance): 30-230MHz, 30dB $\mu$ V/m; 230-1000MHz, 37dB $\mu$ V/m
Frequency range	: 30-1000MHz (see Note 1)
Kind of test site	: Semi-anechoic chamber
Test distance	: 10m
Input voltage	: PV input port: DC 600V; AC output port: AC 400V, 50Hz
Operational mode	: Operated continuously with full load
Earthing	: Earthing through plug cord. (as class I equipment)
Ambient condition	: Temperature: 25°C; Relative humidity: 55%
Expanded measurement uncertainty ( $k=2$ )	: 4.16dB

The radiated disturbance test was carried out in a semi-anechoic chamber. The test distance from the receiving antenna to the EUT is 3m. The normalized site attenuation of the semi-anechoic chamber is regularly calibrated to ensure the radiated disturbance test results are valid. During the test, the EUT was placed on a wooden table, which is 0.8m high. The wooden table was rotated 360° around and the antenna was varied from 1m to 4m to find the maximum disturbance. The test was performed with the antenna both in its horizontal and vertical polarizations.

The following figures and tables were those measured by an automatic measurement system. A preview test was firstly performed with peak detector. The final test was performed with quasi-peak detector at those critical frequencies during the preview test. In the following figure, “●” means measurement results with quasi-peak detector.

**Note 1:** The highest frequency of the internal sources of the EUT is less than 108 MHz, so according to Note c of Table 1 in EN 61000-6-3:2007+A1 this measurement was only performed up to 1GHz.

**Figure 9: Spectral Diagrams and measurement results, horizontal polarization for EVVO 6000TL3P**

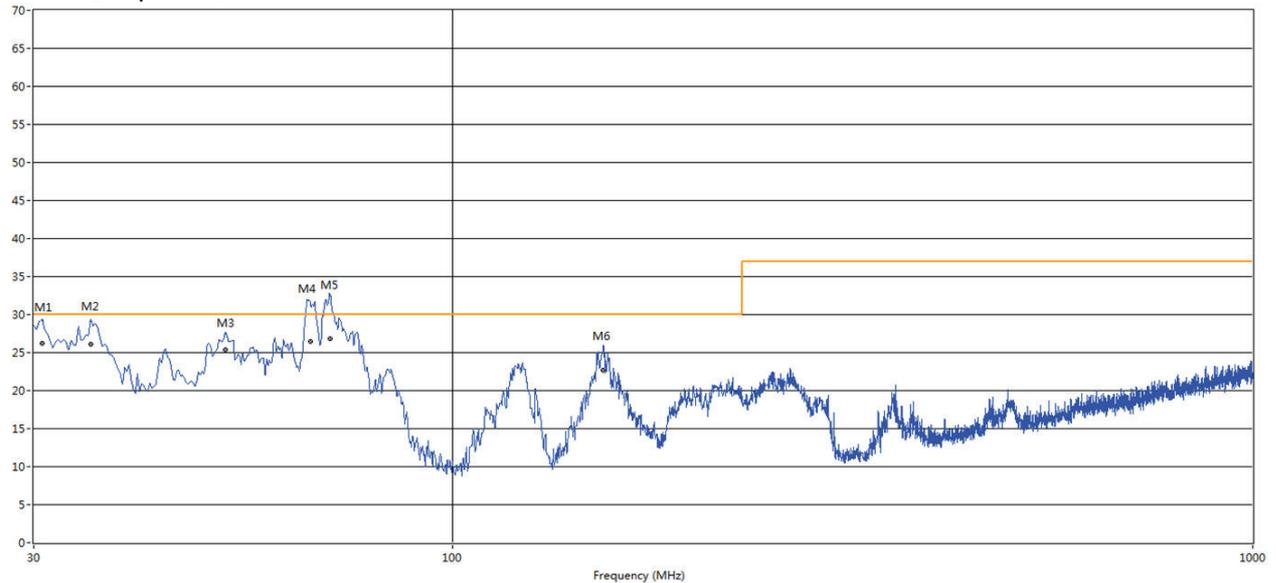

Final Quasi-peak measurement result:

## 5 Test Results IMMUNITY

During the immunity tests, the EUT was operated under conditions specified by clause 3.1 of this report.

The particular performance criterion for the immunity tests are as listed in clause 4 of EN 61000-6-2:2005 is listed as follows:

Performance criterion A: The apparatus shall continue to operate as intended during and after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, either of those may be derived from the product description and documentation, and from what the user may reasonably expect from apparatus if used as intended.

Performance criterion B: The apparatus shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed. No change of actual operating state or stored data is allowed. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, either of those may be derived from the product description and documentation, and from what the user may reasonably expect from apparatus if used as intended.

Performance criterion C: Temporary loss of function is allowed, provided the function is self-recoverable or can be restored by the operation of the controls.

## 5.1 Enclosure

### 5.1.1 Electrostatic Discharge

<b>Result:</b>	<b>Passed</b>
----------------	---------------

The immunity against electrostatic discharge was tested in accordance with EN 61000-6-2:2005. Test setup and ESD-Generator are according to IEC 61000-4-2 which is specified by EN 61000-6-2:2005.

The EUT is placed on 0.8m wood table above the ground plane. And the minimum distance between the EUT and all other conductive structures except the ground plane beneath the EUT is more than 0.5m.

The reference ground plane is an aluminium sheet of 0.25mm minimum thickness. The reference ground plane is connected to the protective earth. The size of the ground plane is 2m x 2m.

A horizontal coupling plane (HCP), 1.6m x 0.8m, placed on the table and isolate the EUT 0.5mm thick. Vertical coupling plane of dimensions 0.5m x 0.5m is placed parallel to and positioned at a distance of 0.1m from the EUT.

Test date	: 17.06.2017
Test procedure	: IEC 61000-4-2 : Table 1 of EN 61000-6-2:2005
Test level	: ±2.0kV, ±4.0kV contact discharge; : ±2.0kV, ±4.0kV, ±8.0kV air discharge
Polarity	: Positive / Negative
Number of discharges	: 10 at each point
Input voltage	: PV input port: DC 600V; AC output port: AC 400V, 50Hz
Operational mode	: Operated continuously with light load (1kW)
Performance criteria	: B
Ambient condition	: Temperature: 25°C, Relative humidity: 55%, Pressure: 102kPa

**Table 12: ESD, Positive/Negative Polarity for EVVO 12000TL3P**

Position	Kind of Discharge	Result	Remarks
Plastic enclosure, display screen	Air discharge	Pass	No disturbance of function
Screws, shell	Contact discharge	Pass	No disturbance of function
Buttons, signal lines	Air discharge	Pass	No disturbance of function
AC power lines	Air discharge	Pass	No disturbance of function
DC power lines	Air discharge	Pass	No disturbance of function
Coupling plane (Both HCP and VCP)	Contact discharge	Pass	No disturbance of function

### 5.1.2 RF radiated immunity test

**Result:**

**Passed**

The test was performed inside a 3 m fully-anechoic chamber. The distance between the tip of the antenna and the side of system tested is 3m. The field uniformity of the 1.5mx1.5m plane where the surface of the EUT tested coincides with is regularly calibrated to ensure the 0-6dB field uniformity criterion as specified by IEC 61000-4-3 is met.

The four sides of the system were tested sequentially. The test was performed with the electric field in horizontal and vertical polarizations respectively.

Test date : 20.06.2017  
 Basic standard : IEC 61000-4-3  
 Test level : Table 1 of EN 61000-6-2:2005:  
                   80-1000MHz, 10V/m  
                   : 1.4-2.0GHz, 3V/m  
                   2.0-2.7GHz, 1V/m  
 Step size : 1%  
 Modulation : 80% AM, 1kHz  
 Dwell time : 3s  
 Input voltage : PV input port: DC 600V; AC output port: AC 400V, 50Hz  
 Operational mode : Operated continuously with light load (1kW)  
 Performance criteria : A  
 Ambient condition : Temperature: 22°C, Relative humidity: 54%

**Table 13: RF radiated immunity test results for EVVO 12000TL3P**

Field polarization	Position	Result	Observation
Horizontal polarization	Front side	Pass	No disturbance of function.
	Rear side		
	Left side		
	Right side		
Vertical polarization	Front side	Pass	No disturbance of function.
	Rear side		
	Left side		
	Right side		

### 5.1.3 Power frequency magnetic field

**Result:**

**Passed**

Test date : 17.06.2017  
Test procedure : IEC 61000-4-8  
Test level : Table 1 of EN 61000-6-2:2005, 30A/m  
Field polarization : X, Y, Z  
Frequency : 50Hz & 60Hz  
Input voltage : PV input port: DC 600V; AC output port: AC 400V, 50Hz  
Operational mode : Operated continuously with light load (1kW)  
Performance criteria : A  
Ambient condition : Temperature: 25°C, Relative humidity: 55%

**Table 14: Power frequency magnetic field test results for EVVO 12000TL3P**

Field polarization	Result	Remarks
X	Pass	During the test, the EUT can operate as intended
Y	Pass	During the test, the EUT can operate as intended
Z	Pass	During the test, the EUT can operate as intended

## 5.2 Power Port, Signal and Interconnecting Cable

### 5.2.1 Electrical fast transients and bursts

<b>Result:</b>	<b>Passed</b>
----------------	---------------

Test setup and the fast transient noise generator was according to IEC 61000-4-4 which is specified by EN 61000-6-2:2005.

The EUT is placed on 0.1m wood support above the reference ground plane. And the minimum distance between the EUT and all other conductive structures except the ground plane beneath the EUT is more than 0.5m.

The length between the coupling device and the EUT is less than 0.5m. The excess length of the cable shall be folded to avoid a flat coil and situated at a distance of 0.1m above the ground reference plane.

The reference ground plane is an aluminium sheet of 0.25mm minimum thickness. The reference ground plane is connected to the protective earth. The size of the ground plane is 2m x 2m.

Test date	: 17.06.2017
Test procedure	: IEC 61000-4-4
Test level	: Table 2, 3, 4 of EN 61000-6-2:2005, ±1kV, 5kHz for signal port ±2kV, 5kHz for DC power port ±2kV, 5kHz for AC power port
Polarity	: +/-
Coupling duration	: 2min/polarity
Performance criteria	: B
Input voltage	: PV input port: DC 600V; AC output port: AC 400V, 50Hz
Operational mode	: Operated continuously with light load (1kW)
Ambient condition	: Temperature: 25°C, Relative humidity: 55%

**Table 15: EFT/B immunity test results for EVVO 12000TL3P**

Tested cable	Result	Coupling	Remarks
AC power port (L1+L2+L3+N+PE-GRP)	Pass	CDN	During and after the test, the EUT can operate as intended.
PV port (DC power port)	Pass	Capacitive coupling clamp	During and after the test, the EUT can operate as intended.

### 5.2.2 Surges

**Result:**

N/A

Test setup and test generator were according to IEC 61000-4-5 which is specified by EN 61000-6-2:2005. The EUT is placed on the reference ground plane.

Test date : 29.06.2017  
 Test procedure : IEC 61000-4-5  
 Test level : Table 3, 4 of EN 61000-6-2:2005  
                   ±0.5kV(DC power ports, line-to-earth);  
                   ±0.5kV(DC power ports, line-to-line)  
                   ±2kV(AC power ports, line-to-earth);  
                   ±1kV (AC power ports, line-to-line)  
 $T_r/T_n$  : 1.2/50µs (open-circuit voltage)  
                   8/20µs (short-circuit current)  
 Polarity : Positive / Negative  
 Pulse number : 5 pulses for each polarity  
 Coupling phase : 0°, 90°, 180° and 270°  
 Repetition rate : 1 pulse/min  
 Performance criteria : B  
 Input voltage : PV input port: DC 600V; AC output port: AC 400V, 50Hz  
 Operational mode : Operated continuously with light load (1kW)  
 Ambient condition : Temperature: 25°C, Relative humidity: 55%

**Table 16: Surge immunity test results for EVVO 12000TL3P**

Coupling mode	Result	Remarks
L1-L2, L1-L3, L2-L3	Pass	During and after the test, the EUT can operate as intended
L1-N, L2-N, L3-N	Pass	During and after the test, the EUT can operate as intended
L1-PE, L2-PE, L3-PE, N-PE	Pass	During and after the test, the EUT can operate as intended
PV port (DC power port)	Pass	During and after the test, the EUT can operate as intended

### 5.2.3 Conducted disturbances, induced by RF fields

**Result:**

**Passed**

Test setup and the test generator were according to IEC 61000-4-6 which is specified by EN 61000-6-2:2005.

The EUT is placed on a ground reference plane and shall be insulated from it by an insulating support 0.1m thick. And the minimum distance between the EUT and all other conductive structures except the ground plane beneath the EUT is more than 0.5m.

The coupling and decoupling networks was placed on the ground reference plane, making direct contact with it at about 0.1-0.3 meter from EUT. The cable between EUT and CDN is as short as possible and not bundled nor wrapped. The height of cable between the EUT and the coupling and decoupling networks above the ground reference plane was 50mm.

Test date : 17.06.2017  
 Basic standard : IEC 61000-4-6  
 Test level : Table 2, 3, 4 of EN 61000-6-2:2005, 10V  
 Frequency range : 0.15 – 80 MHz  
 Modulation : 80%AM, 1kHz  
 Frequency scan speed : Frequency step: 1%; dwell time: 3s  
 Performance criteria : A  
 Input voltage : PV input port: DC 600V; AC output port: AC 400V, 50Hz  
 Operational mode : Operated continuously with light load (1kW)  
 Ambient condition : Temperature: 25°C, Relative humidity: 55%

**Table 17: Injected current measurement results for EVVO 12000TL3P**

Coupling mode	Result	Remarks
AC power port	Pass	During and after the test, the EUT can operate as intended
PV port (DC power port)	Pass	During and after the test, the EUT can operate as intended

#### **5.2.4 Voltage dips and interruptions to AC Power Port**

**Result:**

N/A

The EUT only has AC output port. According to Note c of Table 4 in EN 61000-6-2:2005, this requirement is only applicable to input ports. Therefore, this requirement is not applicable.
